

## Tokyo University of Agriculture and Technology (National) Graduate School of Agriculture

### JDS Cambodia

**Sub-Program** 1. Industrial Development  
**Component** 1-2. Agriculture and Rural Development

<b>Program</b>	International Innovative Agricultural Science Course, International Innovative Agricultural Science Special Program	
<b>Degree(s)</b>	a. Master of Agriculture b. Master of Philosophy	
<b>Credit and duration</b>	30 credits, 2 years	
<b>Address</b>	<a href="#">3-5-8 Saiwai-cho, Fuchu-shi, Tokyo 183-8509 Japan</a>	

### Features of University ( <http://www.tuat.ac.jp/en/> )

The history of Tokyo University of Agriculture and Technology (TUAT) goes back to 1874 when it was Agricultural Training Institute and Silkworm Disease Experiment Section in the Ministry of Home Affairs. These two institutions had each own history and they were developed to Tokyo College of Agriculture and Forestry and Tokyo Textile College in 1944. Then, in 1949, under the modern university systems, the two colleges were unified to Tokyo University of Agriculture and Technology. In 2004, TUAT was transformed to National University Corporation, Tokyo University of Agriculture and Technology. TUAT has two campuses: Fuchu Campus for Institute of Agriculture (Land area about 28 ha) and Koganei Campus for Institute of Engineering (Land area about 16 ha). Both campuses are easy to access from the central Tokyo.

TUAT has two Undergraduate Schools: Agriculture and Engineering, three Graduate Schools for Master Courses: Agriculture, Engineering and Bio-Applications and Systems Engineering (BASE) and four Graduate Schools for Doctor Courses: United Graduate School of Agriculture Science (united with Ibaraki University and Utsunomiya University), United Graduate School of Veterinary Science (under Gifu University), Graduate School of Engineering and Graduate School of BASE. As of May 1, 2020, the numbers of students in Undergraduate Schools and Graduate Schools including Master and Doctor Courses were 3,789 and 1,911, respectively (not including number of doctor students of Graduate School of Veterinary Science). The numbers of Faculties, and Staffs were 394 and 209, respectively. The number of graduate students per one Faculty is 4.85.

The ethics of TUAT is MORE SENSE, it means Mission Oriented Research and Education giving Synergy in Endeavors toward a Sustainable Earth. As well as stimulating knowledge acquisition in the field of science and technology, TUAT nurtures students' autonomous capabilities to explore knowledge, pursue objectives and resolve problems. TUAT also cultivates and produces preeminent researchers, engineers and highly-skilled professionals who are capable of establishing a symbiotic society and of contributing to human society with deep intelligence, broad cosmopolitanism and high ethics.

TUAT promotes the creation of new first-rate knowledge through "mission-oriented research" varying from basic inquiries to technology applications in the fields of agriculture, engineering and the integration of both as mainstays supporting human society. With high ethics, TUAT fulfills social responsibility in the capacity of transmitting science and technology information towards the construction of a sustainable society where both human beings and nature can thrive in a symbiotic relationship. TUAT contributes to the Japanese advancement of science and technology by promoting cooperation and exchange with research institutions, industries and local communities. It helps to enhance, revitalize and develop industries and local communities by participating in the cultivation of academic culture and the creation of a foundation for scientific training.

Through education and research activities that foster a healthy development of science and technology and by returning such achievements to society, TUAT strengthens academic and cultural exchange with foreign countries to construct a global symbiotic society, with an aim to contributing to maintaining international peace and improving the welfare of the human race.

TUAT has remained highly competitive by winning number of MEXT programs among top universities in Japan. TUAT was ranked top 51-100 by QS World University Rankings by Subject 2020 - Agriculture & Forestry, which resulted within the best 5 Japanese Universities. In June 2020, TUAT has 163 affiliated universities and institutions in 43 countries. Table 1 and Figure 1 show the situation of international students.

## Features of Graduate School ( <http://web.tuat.ac.jp/~ieas/index.html> )

International Innovative Agricultural Science Course (IIAS), was initially established in 1999. Then, IEAS reorganized as International Innovative Agricultural Science Course (IIAS), established in 2019 provides a multi-disciplinary master's course designed to train students and researchers to be at the forefront in the development of the limited natural resources while maintaining the healthy environment for achieving Sustainable Development Goals (SDGs). In recent years, intense human activities such as rapid industrialization and overexploitation of natural resources have been causing severe global environmental problems. These problems include environmental pollution, global climate change, natural disasters, drought, acid rainfall and desertification, degradation of tropical forests, soil erosion, water pollution, and environmental hormones. In addition, the exponential population growth coupled with global food shortages is the most pressing issue that demands utmost attention. To tackle these problems, a holistic approach to sustainable development is indispensable. We should develop appropriate policies for maximizing food production to improve the quality of human life, while avoiding the degradation of limited natural resources, and maintaining an ecological balance.

Lately, there is an increasing global awareness of environmentally friendly methods of food production. We recognize that the success of such methods depends on the integration of concepts and technologies from diverse disciplines, and that only a multi-disciplinary approach can ensure such sustainable development.

IIAS consists of three major research and education fields: International Environmental Rehabilitation and Conservation, International Biological Production and Resource Science, and International Development on Rural Areas. Their aims are shown in Fig. 2.

In newly introduced IIAS in 2019, we also have strong corroboration with applied animal science and applied life chemistry. IIAS has two Master courses: Regular and Special ones. The regular course starts in April and the special one starts in October. All lectures offered are given in English. IIAS is currently conducting various international programs with collaboration of JICA Partnership Program in agricultural development.

Please see the detailed information in the following website. <http://web.tuat.ac.jp/~IEAS/>

## Features of the Program ( <http://web.tuat.ac.jp/~ieas/english/gaiyou.html> )

JDS Fellows will be involved in the Special Course of IIAS. The Course primarily focuses at optimization of food production, conservation of the environment, and the restoration of degraded resources. We emphasize on integrating the technical merits of the various disciplines to develop holistic methods of resource development. Ecologically, culturally, and socially effective strategies will then be applied to actual rural problems through international technology transfer.

IIAS Special Course aims at training engineers and scientists who have broader international view of “Environmental and Agricultural Science” and wider knowledge in several disciplines such as sociology, ecology, agronomy, and engineering. Today, environmental policy is an important subject to the environmental and agricultural technologies of our interest. We particularly focus on the policy-related studies in the fields of human, social and economic sciences with regards to the technological functions.

As of June 2018, Graduate School of Agriculture will be reorganized from the fiscal year 2019. Along with this reorganization, Department of IIAS will also be developed as International Innovation Agricultural Science Course in Department of Agricultural Science, Graduate School of Agriculture.

Additional international programs

### 1) STEP (Short Term Exchange Program)

This is one-year exchange program for sister schools with the following objectives: 1) to provide international students with opportunities for education and research regarding the latest industry and technology in Japan, 2) to contribute to the development of science and technology through cooperative research and work with international students, 3) to promote the globalization of TUAT by fostering the relationship between TUAT students and international students, and 4) to give a better understanding of Japan to international students, and further develop competent individuals familiar with Japan is to enable them to work in international fields.

[http://web.tuat.ac.jp/~icenter/en/exchange\\_program/step.html](http://web.tuat.ac.jp/~icenter/en/exchange_program/step.html)

### 2) ASEAN International Mobility for Students Program (AIMS Program)

This program is specifically offered for Senior and Junior level undergraduate students. ASEAN International Mobility for Students Program (AIMS Program) is a government supported multilateral educational program in the ASEAN region, launched in 2010 by coordination of Malaysia-Indonesia-Thailand and in 2013 current members include Vietnam, the Philippines, Brunei and Japan. Please visit the web site below for more information.

<http://web.tuat.ac.jp/~intl/aims/index.html>

## Necessary Curriculum to Obtain the Degrees

### 1. Field of International Environmental Rehabilitation and Conservation

This field offers the following topics such as: environmental changes in developing areas, ecosystem in agricultural lands, and investigation methodology for environmental deterioration, interaction between biological and human activities, and remediation and conservation of regional environment.

### 2. Field of International Biological Production and Resource Science

Education and research are provided for increasing food production and bio-resource recycling in order to pursue sustainable agriculture for regional and global environmental conservation.

### 3. Field of International Development on Rural Areas

Education and research are provided for sustainable social development and community planning focused on economic, social, and population studies combined with environmental technology and food production technology.

In addition to the three fields above, IIAS has two additional research areas such as International Applied Animal Science and International Applied Life Science.

The duration of the master's program is 2 years. The prerequisite for admission to master's courses at TUAT is principally 16 years institutional education (from primary school to university). The candidates who have 14 to 15 years of academic background may be accepted after the University Committee evaluated their educational and career backgrounds. **Master of Agriculture** or **Master of Philosophy** will be conferred to IEAS students. Students require 32 credits out of the following classes for the s (Table 2).

**Table 2. List of curriculum offered in IIAS .**

Curriculum	Instructor	Study Year	Credits	
			Compulsory	Elective Compulsory
<b>General Study Subjects</b>				
Overview for Agricultural Production Sciences I	Natsume et al.	1·2		1
Overview for Agricultural Production Sciences II	Ohtsu et al.	1·2		1
Overview for Applied Biological Chemistry I	Hattori et al.	1·2		1
Overview for Applied Biological Chemistry II	Yamagata et al.	1·2		1
Overview for Environmental Science and Natural Resources I	Nakaba, Sato.	1·2		1
Overview for Environmental Science and Natural Resources II	Matsumoto	1·2		1
Overview for Agricultural Engineering and Agro-Food Informatics I	Nakashima et al.	1·2		1
Overview for Agricultural Engineering and Agro-Food Informatics II	Tatsumi, Fukuda	1·2		1
Overview for Sustainable Societies I	Takahashi et al.	1·2		1
Overview for Sustainable Societies II	Arai et al.	1·2		1
Overview for International Innovative Agricultural Science I	Gomi et al.	1·2		1
Overview for International Innovative Agricultural Science II	Yamada et al.	1·2		1
Introduction for Science of Agriculture and Technology	Faculty staff	1·2		1
Special lecture for 21st century's agriculture science	Faculty staff	1·2	1	
Multicultural communication and transmission	Tasaki	1·2		2
Advanced lecture of Green, Food, and Life science	Gomi et al.	1·2		1
Arts of Intercultural Communication	Cooperating Prof.	1·2		2
Advanced lecture on Agriculture Science I	(Foreign Guest Lecturer)	1·2		1
Advanced lecture on Agriculture Science II	Saito	1·2		2
Japanese I	Hongo	1·2		2
Japanese II	Ito	1·2		2
<b>General Study Exercise</b>				
Exercise for Methods of Agricultural Experiment Planning and Statistical Analysis I	Fukano, Ikeda, Okuda, Kawamori	1·2		1
Exercise for Methods of Agricultural Experiment Planning and Statistical Analysis II	Abe	1·2		1
Field and Laboratory Safety and Research Ethics I	Shirabe	1·2		1
Field and Laboratory Safety and Research Ethics II	Shirabe	1·2		1
Management and operation of intellectual property	Tasaka	1·2		1
Exercise for Spatial Information Analysis	Iwao	1·2		1
Subject Exercise for Agricultural Research	Supervisor	1·2		1
Practical Exercise for Agricultural Research	Supervisor	1·2		1
International Research Presentation I	Supervisor	1·2		1
International Research Presentation II	Supervisor	1·2		1
Exercise for Agricultural Science I	Yamada, Kawabata	1·2		2

Exercise for Agricultural Science II	Okazaki	1·2		2
Exercise for Agricultural Science III	Watanabe, Kato	1·2		2
Exercise for Agricultural Science IV	Gomi	1·2		2
Exercise for Agricultural Science V	Kato	1·2		2
<b>Special Field Subjects</b>				
International Environmental Rehabilitation and Conservation I	Gomi	1·2		2
International Environmental Rehabilitation and Conservation II	Watanabe, Kato	1·2		2
International Biological Production and Resource Science I	Oiwaka, Okazaki, Katsura	1·2		2
International Biological Production and Resource Science II	Katsura, Oikawa, Okazaki	1·2		2
International Life and Biological Chemistry I	Miura et al.	1·2		2
International Life and Biological Chemistry II	Cooperating Prof.	1·2		2
International Rural Development and Rural Area I	Kawabata, Nie	1·2		2
International Rural Development and Rural Area II	Yamada, Nie	1·2		2
International Applied Animal Science I	Takehara et al.	1·2		2
International Applied Animal Science II	Uchide et al.	1·2		2
Special Lecture on International Innovative Agricultural Science I	Makihara	1·2		2
<b>Research Subject for Thesis (Special Field Studies)</b>				
Special Research in Agricultural Science I (or III)	Supervisor (Main)	1	4	
Special Research in Agricultural Science I (or IV)	Supervisor (Main)	2		1
Research expansion in Agricultural Science I (or III)	Supervisor (Sub)	1		1
Research expansion in Agricultural Science I (or IV)	Supervisor (Sub)	1		1
<b>(Special Exercise)</b>				
Special Exercise in Agricultural Science I (or II)	Supervisor (Main)	1	4	
Special exercise for Publication Review I (or I I)	Supervisor (Main)	1	2	

Completion Requirements: Students must obtain and pass 4 or more credits from the General Study Subjects (one and more credit from other course and "21 century agriculture science" is required), 2 or more credit from General Study Exercise, 4 and more credit from the Special Field Subjects (including 2 and more credit from the other subject). Research Subject for Thesis (contains 12 credits) are required subjects. Total of 30 credits or more are required for the completion of IAS curriculum.

## List of faculty members capable of guiding JDS Fellows

Supervisors for JDS students will be assigned during the application/selecting processes. The following shows the list of faculty members (Name, Position, Course Title/Research topic below).

\*Faculty members who can officially supervise JDS students are indicated with \*.

Please also see detailed information in the following web site. <http://web.tuat.ac.jp/~ieas/english/staff-e.html>

### Field of International Environmental Rehabilitation and Conservation

\*WATANABE Hirozumi, Prof.

Aquatic Environmental Assessment/Non-point source pollution control of the pesticide through field monitoring and computer modeling

\*GOMI Takashi, Prof.

Regional Environmental Conservation Planning/Investigation of water and sediment transport and assessment of functions of stream ecosystem for Forest and water resources management and conservation.

\*KATO Tasuku, Prof.

Environmental Water Use & Conservation/Conduct research that increases ecological service through watershed management and hydrologic applications in an Asian agriculture irrigation systems.

### Field of International Biological Production and Resource Science

\*KATSURA Keisuke, Associate Prof.

Regional Sustainable Bio-Production Technology/Ecology in crop production, crop physiology and agronomy, researches on improving crop productivity in developing countries.

\*OKAZAKI Shin, Prof.

Improvement of Biological Functions/Investigation of beneficial microbes through genomic analysis and molecular biology.

\*OIKAWA Yosei, Lecturer.

Sustainable Utilization of Biological Resources/Sustainable agriculture and forest management in the tropics.

### Field of International Development in Rural Areas

\*YAMADA Masaaki, Prof.

International Cooperation on Sustainable Agriculture/Development and extension of sustainable agriculture and appropriate technology cooperation in developing region.

\*KAWABATA Yoshiko, Associate Prof.

Global Environment/Research in water quality through revealing the problem, finding the solution and rehabilitate the environment in arid land.

NIE Hai-song, Assistant Prof.

Population Sociology/Research in gender issue such as reproductive health and population control in rural area.

## Academic Schedule

This is the reference schedule for the academic years for the Special Course

### The first year

October	Entrance Ceremony and course orientation. The fall semester classes are started. Library training is given for literature survey. Regular weekly seminar series in IIAS by faculty members are also started. A field trip is organized for the all first-year students of IIAS special and regular courses
November	University festival (some international programs are performed by IIAS members)
(Winter)	Excise for Geographical Information Systems (GIS)/Charcoal-making/Fallen leaves gathering
April	Regular classes and seminars of the spring semester are started.

June	A special field trip on organic farming and rural development is organized to learn about organic tea and paddy cultivation and development of local agriculture systems
July	Intermittent evaluation by poster presentation.

### The second year

October	Fall semester is started. Regular classes and seminars are started.
April	Spring semester is started.
July	Submitting master's thesis. Final presentations of master's studies
August	Revising master thesis for final submission
September	Degree ceremony

## Facilities

International Affairs Office of TUAT offers various services to JDS students and other international students and fellows. They include Japanese language courses, medical care, international houses (=dormitories), library services, and IT services.

TUAT has international houses on both Fuchu and Koganei campuses. International students of TUAT can also live in the International Student Dorm of Hitotsubashi University located in Kodaira City, about 5 kilometers from Fuchu campus. The International Affairs Office provides more detailed information. Tenant applications are accepted: every January, March (new students only), and August. The followings are the room types and numbers as of 2018. In addition, the Hinoki Dormitory in Fuchu Campus is also available for both international and Japanese students.

	Singles	Doubles	Family units	Total
Fuchu	40	4	4	48
Koganei	32	3	2	37
Kodaira	33	3	7	43
Total	105	10	13	128

Note: Length of residence is 1 year or less (2 years or less at Kodaira)

## Message for Applicants

We welcome to international applicants who wish to pursue graduate study at International Innovative Agricultural Science (IIAS) program. The IIAS program covers environmental restoration and conservation, agricultural improvement, and development for sustainability of the society. The goal of education in IIAS is to establish a long-term comprehensive view of agricultural and environmental issues. Using the international collaboration network, professors and students carry out individual and/or cooperative research projects related to the fields of agricultural and environmental science in a holistic way. They take the outcomes of the researches, and apply them to work out the solutions that are ecologically, culturally and socially applicable in practical ways in developing regions.

The program aims to train not only specialists in individual fields, but also generalists who understand the importance of holistic, interconnected approach among agriculture, rural development, and environmental sustainability. The students are expected to be leaders with "field-oriented" mind and skill sets, who can identify environmental issues and propose effective measures for achieving sustainable development while working in cooperation with local stakeholders in developing regions. We have been supporting students from different countries in the world to develop such abilities as leaders in the fields of sustainable agriculture and rural development as well as environmental conservation technology and management. More than 20 Cambodian alumni (including 19 JDS fellow) of IIAS have been playing active roles in those fields.

Our special program provides JDS fellows from Cambodia with opportunities to learn both local and international issues on agriculture and environments. In the program, the fellows can focus on the subjects to solve the problems in Cambodia such as 1) policy-making and development planning for agricultural development, 2) irrigation and water resource management for improving agricultural productivity and rural economy, and 3) technology development for improving farm management through intensification and diversification of rice-based farming system, and so on. Since our university has a strong international network with sister universities including Cambodian universities, we have been strengthening the cooperation with international partners through intensive and active research and educational programs including JDS. We therefore welcome your application for IIAS to contribute to agriculture and rural development in Cambodia through our network.

Since IIAS Department was established in 1999, we have hosted many international students from Japan, South Korea, China, Vietnam, Cambodia, Laos, Thailand, Myanmar, Malaysia, Indonesia, Mongolia, India, Bangladesh, Nepal, Mongolia, Uzbekistan, Afghanistan, Iran, Kenya, Ghana, Brazil, etc. Our university has strong international network of sister universities. Many alumni of IIAS (including 96 JDS fellows) have been playing active roles related with agriculture and environmental fields. We train students to serve as leaders with "field-oriented" mind and skill sets so that they can identify environmental issues and propose effective measures for achieving sustainable development while cooperating with local and global stakeholders in the world.

Field Trip to Fukushima

Visit to an organic tea farm in Shizuoka
